

LastPass

LastPass Premium is available to university students, faculty, and staff as part of the Information Security Platform

What is LastPass?

LastPass is an industry-leading password manager. Password managers store your usernames and passwords for your online accounts in an encrypted vault that you can access across your devices. Logging into LastPass allows you to easily access, save, and update your passwords - and the only password you have to remember is the master password for your LastPass account. There are other benefits too. You can create and store secure notes to capture answers to your security questions. And you can store addresses and financial information - all securely.

How to use LastPass?

Install the LastPass browser extension and/or Mobile App

https://lastpass.com/misc_download2.php

After you download LastPass, you'll find the LastPass button in your browser toolbar or with your apps on your mobile device. This is where you log in to LastPass using your university email username/password.

Add sites

Forgetting passwords is a thing of the past. Start by filling your vault with logins and passwords. There are many ways to add sites:

- Let LastPass save sites as you login,
- Import sites from your email,
- Import/Upload from another password manager, and more

Explore your LastPass vault

Review the menu and types of items that you can save.

Create secure notes

Add notes for answers to security questions, insurance cards, memberships, prescriptions, Wi-Fi passwords... No more Post-It notes on your desk!

Audit passwords

Use the LastPass Security Challenge to find weak, duplicate, old, and vulnerable passwords that may be hiding in your vault, and update them to improve the security of your accounts.

Online Shopping

Store all of your credit cards and autofill that information for an easy and quick online shopping experience.

Phishing Protection

If you're logged into LastPass and you accidentally go to a fake website, LastPass recognizes the difference for you and doesn't fill in your username and password.

Secure Notes

Use LastPass to store answers to security questions on sites, important travel documents or itineraries, emergency contact information, or financial information.

Security Challenge

The LastPass "Security Challenge" will give you a personal security score that factors in things like reused passwords or if any of your accounts have been involved in a breach. Use this feature to improve your online security.

The screenshot displays the LastPass web interface. At the top, there's a search bar labeled "Search my vault" and a user profile picture. Below this, a grid of login items is shown, each with a logo and details: Project jira (jane.miller@gmail.com), Google (work) (jane.miller@acme.com), Home Wi-Fi, Microsoft (jane.miller@acme.com), Amazon (jane.miller@gmail.com), Dropbox (jane.miller@acme.com), Corporate Twitter (jane.miller@acme.com), Netflix (jane.miller@gmail.com), Instagram (jane.mill...), Corporate card, Monday, and Salesfo. A mobile app interface is overlaid on the left, showing a "Vault" section with a search bar, tabs for "All items", "Passwords", and "Secure notes", and a list of "Favorites (2)" including Amazon and Google, and "Passwords (77)" including Facebook (marked "At risk") and Microsoft.
